

How messenger bots will change the way we play

By [James Tagg](#)

28 May 2019

The number of active mobile social users in Africa increased by 17% from January 2018 to January 2019 and Facebook remains the number one social media network worldwide. The social media behemoth announced a number of innovative features at its annual developer conference held recently.

Daniel Korpai

Perhaps the most exciting of these features, well for this geek anyway, was how messenger bots and AI will fundamentally change my business and open up a world of possibility across the events business.

What are messenger bots?

Messenger bots are autonomous digital messages that can answer questions, provide automated responses and be programmed with simple AI.

Why savvy instant messaging campaigns can drive global brand awareness

Facebook Messenger bots are a new communications channel. With 1.3 billion monthly active Messenger users, this new feature has the potential to disrupt the way businesses across all industries connect with their customers on a one-on-one basis.

What does this mean for the events industry?

Let's look at an example for event attendees: You're already connected on social with your ticket vendor bot and now with a few clicks, you can find out what's happening in your area, how much tickets are and ask for reminders to purchase them. You can share these events with your friends and share your booking info so they too can book.

You can complete the transaction including payment without having to leave the platform and will receive your ticket as a QR code straight to your Messenger app. You'll also be able to split tickets and send them directly to the people going with you.

Event managers, on the other hand, will get real-time stats and analytics on ticket sales and will be able to engage and chat directly to any guests that have opted into the service via Messenger. Tickets can be issued immediately and your database of contacts could be directly targeted and invited to select events.

For business owners, these developments and feature could significantly cut marketing costs, while customising the message and thus enhancing the customer experience based on an individual's needs as the chat progresses.

The need for engagement

These types of experiences foster sincere engagement with businesses and dovetail with our natural need for social interaction.

In more traditional marketing terms the process involves reaching the widest possible audience with something in common in order to pitch a product or service to them. Chatbots engage individuals on a more personal level and respond to their individual requests through the power of artificial intelligence which allows them to be highly interactive.

And for anyone who has ever had to organise an event, perhaps the ultimate benefit of chatbots means not having to answer the same questions a million times over.

ABOUT JAMES TAGG

James Tagg is co-founder and co-director of Quicket where he initially worked on the development of the platform and later shifted focus into operations as MD. With a background in web development, he is drawn towards automation and extracting efficiency from day to day operations in and out of the work environment.
