

MultiChoice gets Soweto TV some new equipment

MultiChoice provided community channel Soweto TV with new state-of-the-art broadcasting equipment. The donation includes the latest technology, a new Final Control Centre with Cinegy Air PRO - a broadcast automation with video servers for SD and HD playout for multichannel.

The new equipment will allow for quality broadcasting for viewers at home; on-the-job training for local youth; and an improved production quality. In addition to equipment donations, MultiChoice also helps the five community television stations on its DStv platform to develop their broadcasting skills and know-how.
