"We will be showcasing our analytical services and products unique to the mining industry and our services that range from full testing laboratories to setting up and operating on-site," says Kevin Gerber, managing director of Set Point Laboratories.

Set Point Laboratories also offer unique mine-site mobile and underground laboratories which allows clients to focus on their core competencies while ensuring that the analytical data received is accurate and consistent.

"Acknowledged as the largest annual investment conference held in Botswana, this conference is set to attract a substantial number of investors and we are pleased to be part of it as it will provide us with great networking opportunities - particularly with regards to our coal analysis offering," says Gerber.

Set Point Laboratories has a branch in Francistown, Botswana and offers testing of the platinum group metals and gold, base metals, light elements, uranium and rare earths, coal and water.
