15 Aug 2012

Exhibitors and event organisers can now access a newly designed distribution board for stands, that takes up half the space and ends the problem of wires trailing on the floors.

Launched this month by Scan Display, the distribution board requires only 0.5 m<sup>3</sup> of space, compared to standard designs needing 1m<sup>3</sup>, which is 55% smaller. Wiring is concealed in specially engineered conduit channels and raised above floor level.

"Our research and customer feedback has shown that 25% of exhibitors requiring electrical reticulation have faced challenges with standard distribution boards," said Scan Display CEO Justin Hawes. "We have addressed this problem by developing a compact, tidy model that is installed above the ground in every 3 x 3m booth cluster."

The stands also offer LED lighting, which saves 80% of stand lighting costs, ensures a cooler, more comfortable environment and enables focusable lighting.

The distribution boards and stand offerings are available countrywide through Scan offices in Johannesburg, Durban, Cape Town, Port Elizabeth and Gaborone, and through its extensive distribution network.
