

Thanks to Huawei's backup solutions, South Africans won't be left in the dark this festive season

Issued by [Huawei Technologies](#)

12 Dec 2023

The last thing any South African wants this festive season is to have their celebrations interrupted by an unplanned power outage or a sudden escalation in load shedding.

A festive-themed advertisement for the Huawei Power-M solution. The background shows a modern house at night with a large, brightly lit Christmas tree in the front yard. A man and a woman, both wearing Santa hats, are standing in the yard, looking up at the tree. The house's interior is visible through large windows, showing a cozy living room with a fireplace and a Christmas tree. In the foreground, a white, rectangular Huawei Power-M unit is displayed. The unit has a circular logo at the top and a blue ribbon tied around it. The text "HUGE PRICE DROP" is written in white on a red banner at the top right. Below it, the text "SAY GOODBYE TO LOAD SHEDDING THIS FESTIVE SEASON!" is written in white. Underneath, it says "All-in-one battery & inverter solution. 2+ Hours backup power." in white. The price is listed as "FULLY INSTALLED From R1,699PM*" in white, with "R1,699PM*" in large, bold, red letters. Below that, the "CASH price R64,999*" is shown in large, bold, red letters. A small note at the bottom says "*Additional R2000 discount for purchases in December". At the bottom left, the Huawei and Fusionsolar logos are displayed. At the bottom right, a red banner says "GET OFFER myfusionsolar.co.za" in white, with a small note "(T&C's apply)" below it.

HUGE PRICE DROP

SAY GOODBYE TO LOAD SHEDDING
THIS FESTIVE SEASON!

All-in-one battery & inverter solution.
2+ Hours backup power.

FULLY INSTALLED
From **R1,699PM***

To ensure that we can enjoy energy security this festive season, Huawei is running a massive promotion on its all-in-one Power-M solution. The promotion, which has seen Huawei significantly reduce the price of the solution, also includes installation and financing (if necessary) through partnerships with Verteco and Absa respectively. The promotion also includes a hardware warranty as well as a six-month guarantee on installation through Verteco. Installation complies with the South African National Standards (SANS), has double surge protection, and meets the requirements of your insurer and any bank financing.

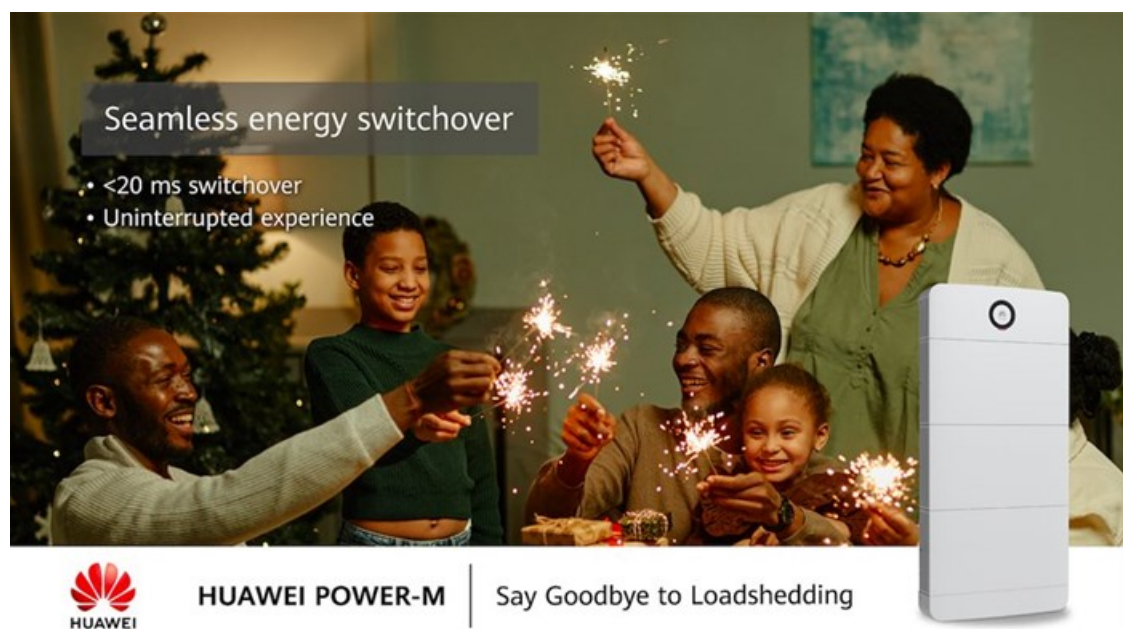

Huawei's Power-M solution is ideal for apartment complexes, clusters, homes, and small businesses requiring backup power with no disruption. The solution, which combines batteries and an inverter, also includes built-in fire protection, safety features, quiet operation and IP66 waterproofing. The sleek unit is a slim 16cm aluminium alloy enclosure with a frosted texture.

Consumers can flexibly choose the number of battery modules to expand the capacity whenever they want, allowing them to start small and grow over time. With a single-unit backup ranging in size from 5kWh to 15kWh, up to three units can be installed in parallel, maximising the capacity to 45kWh. In this configuration, the solution is ideal for small and medium-sized enterprises as well as homes.

To provide a better home usage experience, the Power-M supports seamless switchover between multiple energy inputs, such as solar, grid, and generator. Thanks to its fanless construction, the Power-M is incredibly quiet too. With an operating sound level of less than 29dbm, it has a sleep-grade noise rating. The unique plug-and-play design, meanwhile, means that installation is quick and easy, typically taking less than two hours.

“Huawei’s residential solutions help users cope with daily challenges such as load shedding, as well as unexpected outages,” explains Xia Hesheng, President of Huawei Digital Power sub-Saharan Africa region. “Our solutions also aim to address some of the most serious challenges faced by the residential market, including user experience, systems requiring mixing manufactures, quality, service, efficiency, and aesthetics”.

Xia added: “Huawei is focusing on ‘4T’ Technologies (Watt/Heat/Battery/Bit), which will drive residential PV scenarios with high-quality products that are not only aesthetically pleasing but also offer high-quality system-level solutions, which integrate digitalisation and intelligence into the PV industry.”

A family of four (father, mother, and two children) are shown in a living room, celebrating with sparklers. A Huawei Power-M battery unit is visible on the right side of the image. The background includes a Christmas tree and a painting on the wall.

Seamless energy switchover

- <20 ms switchover
- Uninterrupted experience

 **HUAWEI POWER-M** | Say Goodbye to Loadshedding

Through the course of 25 years of operations in sub-Saharan Africa, Huawei has developed a deep understanding of the region’s energy and technology requirements. In addition to its backup solutions, Huawei has launched smart photovoltaic (PV) solutions for all scenarios of the African residential market and is committed to bringing clean energy to every home on the continent.

Together with our partners and customers, we’re lighting up a greener Africa this festive season!
